JOURNAL OF CRYSTAL GROWTH

Subject index

Agglomeration of crystals 505
Alloys
– of aluminum–iron 561
Aluminum 285
– arsenide 85, 365
– copper iron quasicrystal 297
– ferrite 561
– gallium arsenide 85, 855
– iron, alloy 561
Ammonium
– chloride 594
Apparatus
– for growth under microgravity 513
– for melt growth
– – by Czochralski method 643
– – – of gallium indium antimonide 269
– for thin film growth
– – by vapor phase epitaxy
– – – through metalorganic chemical vapor deposition 383

Barium
– borate 279
Bismuth
– lead strontium calcium cuprate 496
– strontium calcium cuprate 481, 496
Buckminster fullerene 154, 157

Cadmium
– magnesium selenide 41
– selenide 383
– sulphide selenide 476
– telluride 53, 383, 409, 447
Calcium
– oxalate hydrates 235, 523
Cellular growth
– of thermolysin 199
Characterization
– of barium borate 279
– of dislocations and microdefects
– – in gallium arsenide 302
– – in nitrides 309
– – theory of 71
– of relaxation and mosaicity profiles in epitaxial layers 41
– of solubility of oxalates 135
– of solubility of octacalcium phosphate succinate 533
– of strain in cadmium telluride layers 53
Computer simulation
– of convection 587
– of crystal growth 331
– of floating zone growth of tube crystals 606
– of horizontal Bridgman crystal growth 341
– of molecular orbital calculations 259
– of nucleation and growth 571
– of oxide film growth 145
Convection 341, 587, 594, 619

Dendritic growth
– of aluminum ferrite 561
– of ammonium chloride 594
Device characterization
– diodes 367
– heterojunction 246
– lasers 646
– quantum wells 85, 455
Diamond 165, 172, 370, 639
Diodes, see Device characterization

Epitaxy, see Thin film growth
Etching
– chemical 61, 85, 367, 377
– photolithographic 85

Fullerene 154, 157

Gallium
– antimonide 290
– arsenide 23, 31, 71, 78, 85, 259, 302, 367, 377, 423, 441, 455, 469, 623, 629
– indium antimonide 269
– indium arsenide 11, 129
– indium phosphide 123, 646
– nitride 633
– phosphide 123
– selenide 1
Garnets 253
Graphite 370

Heterojunction, see Device characterization
Hydrargillite 505
Hydrodynamics, see Convection
Hydroxyapatite 229, 539

Indium
– aluminum arsenide 365
– antimonide 401, 434
– arsenide 97
– gallium aluminum arsenide 463
– phosphide 11, 123

Kinetics
– of formation 533
– of growth 11, 61, 85, 209, 323, 354, 434, 548, 623
– of interface control 209
– of precursor decomposition 423

Lasers, see Device characterization
Lasers, crystals for 373, 646
Lead
– bromide 619
– germanium telluride 565
Lithium
– vanadate 555
Lysozyme 548

Manganese
– telluride 447
Melt growth technique
–by Bridgman–Stockbarger method
– – of aluminum ferrite 561
– – of ammonium chloride 594
– – of lead bromide 619
– by Czochralski method
– – of gallium antimonide 290
– – of gallium arsenide 623
– – of gallium indium antimonide 269
– – of sodium nitrate 643
– – of strontium tetraborate 373
– – theory of 359
– by floating zone method
– – of bismuth strontium calcium cuprate 481
– – of lithium vanadate 555
– – theory of 606
– by flux method
– – of aluminum copper iron quasicrystal 297
Mercurcy
– cadmium telluride 383
– telluride 383
– zinc telluride 383
Microgravity, growth under
– of ammonium chloride 594
– of protein 183, 513
Morphological stability
– of gallium indium phosphide 646
– of graphite 370
– theory of 331

Neodymium
– gallium garnet 253
Niobium
– nitride 309
Nucleation
– of calcium oxalate hydrates 235, 523
– of neodymium gallium garnet 253
– of thermolysin 199
Numbers
– Grashof 587
– Rayleigh 619

Octacalcium
– phosphate 229
– phosphate succinate 533
Oxalates 135

Paraffins 209
Phase diagrams
– of carbon/hydrogen 165
– of carbon/hydrogen/oxygen 165
– of carbon/oxygen 165
– of potassium yttrium tungstate/potassium tungstate 636
– of yttrium vanadate 646
– of zinc arsenide/germanium 601
Potassium
– yttrium tungstate 636
Precursor
– for aluminum film growth 285
– for bismuth lead strontium calcium cuprate 496
– for indium antimonide 401
– for sulphur doping 31
Proteins 183, 513

Quantum wells, see Device characterization
Quasicrystals 297

Ruthenium
– telluride 224

Silicon 246, 273, 606
– carbide 61
Sodium
– nitrate 643
Solid growth technique
– by recrystallization
– – of bismuth lead strontium calcium cuprate 496
– by sintering
– – of yttrium barium cuprate 487
Solution growth technique
– by flux method
– – of potassium yttrium tungstate 636
– – of yttrium vanadate 646
– by hydrostatic pressure
– – of lysozyme 548
– by low temperature method
– – of calcium oxalate hydrates 235
– – of hydrargillite 505
– – of hydroxyapatite 229, 539
– – of octacalcium phosphate 229
– – of paraffins 209
– – of protein 183
– – of strontium sulphate 323
– – of tetrathiofulvalene–tetracyanoquinodimethane 196
– – of thermolysin 199
– by top seeded solution growth
– – of yttrium vanadate 646
Statistical mechanics, molecular theory
– of interfaces 209

Stefan problem or moving boundary problem
– of tube crystals 606
Strontium
– sulphate 323
– tetraborate 373
– titanate 145
Superconductivity materials, high T_c
– bulk
– – of BiSCCO 481, 496
– film
– – of YBCO 145, 487
Superlattices, multilayers
– of III–V compounds 123
– of II–VI compounds 447
Surface energy, determination
– of paraffins 209
Surface structure
– of diamond film 172
– of indium antimonide 401
– of indium arsenide 97
– of paraffins 209

Tetrathiofulvalene–tetracyanoquinodimethane 196
Thermolysin 199
Thin film growth, epitaxy
– by atomic layer epitaxy
– – of cadmium telluride 447
– – of gallium nitride 633
– – of manganese telluride 447
– – of zinc telluride 447
– by liquid phase epitaxy
– – of gallium arsenide 367
– – of silicon 273
– – theory of 145
– by magnetron sputtering
– – of nitrides 309
– by molecular beam epitaxy
– – of aluminum arsenide 85
– – of aluminum gallium arsenide 85, 455
– – of cadmium telluride 53
– – of gallium arsenide 31, 78, 85, 377, 441, 455, 469
– – of gallium phosphide 123
– – of gallium selenide 1
– – of indium arsenide 97
– – of indium phosphide 123
– – of silicon 246
– – of zinc selenide 41
– – strain limits in 36
– – theory of 354
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 165, 172, 639
– – – of gallium arsenide 259
– – – of gallium indium arsenide 11
– – – of indium phosphide 11
– – – theory of 11, 172
– – through metalorganic chemical vapor deposition
– – – of aluminum 285
– – – of aluminum arsenide 365
– – – of cadmium selenide 383
– – – of cadmium telluride 383, 409
– – – of gallium arsenide 423, 629
– – – of gallium indium arsenide 129
– – – of gallium indium phosphide 646
– – – of indium aluminum arsenide 365
– – – of indium antimonide 401, 434
– – – of indium gallium aluminum arsenide 463
– – – of mercury cadmium telluride 383
– – – of mercury telluride 383
– – – of mercury zinc telluride 383
– – – of zinc selenide 383
– – – of zinc telluride 113, 383
– – – theory of 354, 629
– – through metalorganic chemical vapor deposition, photo-assisted
– – – of gallium arsenide 23
– – theory of 259
Titanium
– nitride 309
Tungsten 606

Vanadium
– nitride 309
Vapor growth technique
– by chemical transport
– – of ruthenium telluride 224
– by evaporation and condensation
– – of cadmium sulphide selenide 476
– – of fullerene 154
– – of lead germanium telluride 565
– – of protein 183
– – of silicon carbide 61
– – of zinc selenide 318
– – theory of 587
– by plasma in arc discharge
– – of fullerene 157

Yttrium
– barium cuprate 145, 487
– vanadate 646

Zinc
– germanium arsenide 601
– selenide 41, 318, 383
– telluride 113, 383, 447
